Name $\qquad$

## Circuit 1

a. Build the circuit on your circuit board.

$$
0 \quad+5 \quad+10
$$

b. Measurements

Use the voltmeter to find the DC voltage across each resistor.

$$
v_{R I}=
$$

$$
v_{R 2}=
$$

$\qquad$

$$
v_{R 3}=
$$

$\qquad$

$$
v_{R 4}=
$$

$$
v_{R 5}=
$$

$\qquad$ $v_{R 6}=$ $\qquad$

Use the ammeter to measure the DC current through the sources $V_{S I}$ and $V_{S 2}$. (Note current direction.)

$$
i_{V S I}=
$$

$$
i_{V S 2}=
$$

$\qquad$

Measurements: $0+5+10$
c. Questions: $\qquad$ / 10
d. Total for circuit 1: $\qquad$ / 30

## Circuit 2

The source in the circuit at right is DC.

a. Build the circuit on your circuit board.

$$
0 \quad+5 \quad+10
$$

b. Measurements: Use the multimeter to determine the Thevenin equivalent voltage and resistance with respect to terminals $a$ and $b$.

$$
V_{T h}=
$$

$\qquad$

Measurements: $0+5+10$
c. Questions: $\qquad$ / 10
d. Total for circuit 2: $\qquad$ / 30

## Circuit 3

The voltage source is an AC voltage with frequency of $2 \mathrm{kHz}(2000 \mathrm{~Hz})$ and amplitude of $3 \mathrm{~V}_{\text {RMS }}(8.5 \mathrm{~V}$ peak-to-peak).
a. Build the circuit on your circuit board.

$$
0 \quad+5 \quad+10
$$

b. Use the oscilloscope to correctly display $V_{S}$ and $v_{o c}$ simultaneously. Adjust the vertical scales so that both traces have the same scaling and the $V_{S}$ trace is as big as possible on the screen with having the tops and bottoms clipped off. Adjust the horizontal scale so that there are no more than three periods showing on the display.

Use the voltmeter to measure the all the resistor voltages and then use the ammeter to measure the source current.
$\qquad$
$v_{R 1}=$ ; $v_{R 2}=$ $\qquad$ ; $v_{R 3}=$ $\qquad$

$$
v_{R 4}=
$$

$\qquad$ ; $v_{R 5}=$ $\qquad$ ; $i_{V S}=$ $\qquad$

Measurements: $0 \quad+5+10$
c. Questions: $\qquad$ / 10
d. Total for circuit 3: $\qquad$ / 30
